OVERVIEW

CAPTUREPROOF implements a number of measures to ensure the privacy and security of the health information held and transmitted.

In our implementation of privacy and security protocols for health information security, CAPTUREPROOF is HIPAA, HITECH, NIST 800-53, and FIPS Compliant. CAPTUREPROOF reviews our policies and implementation of policies annually with the aim of meeting and exceeding industry standards for health information security.

CAPTUREPROOF’s Governance policies are designed to ensure the appropriate security of all health information across the environment, in compliance with existing laws. Information Security and complying with HIPAA and HITECH are an integral part of our business operations, therefore CAPTUREPROOF has established a program of sufficient rigor to address its own compliance requirements while also meeting the expectations of its customers.

The Federal Information Processing Standard (FIPS) are a set of standards that describe document processing, encryption algorithms and other information technology standards for use by government contractors and vendors who work with the agencies, and need to demonstrate security standards consistent with those used by US government agencies. CAPTUREPROOF meets and exceeds these standards.

The NIST publications are voluntary guidelines and best practices for state, local, and tribal governments and the private sector, which provide a structured, yet flexible framework for selecting, specifying, employing, and evaluating the security controls in information systems. CAPTUREPROOF uses these guidelines as standards in meeting and exceeding our security obligations under HIPAA and other applicable privacy laws.

CAPTUREPROOF is committed to data protection and to compliance with all applicable privacy laws including international laws such as the EU General Data Protection Regulation (GDPR) and the Swiss Federal Act on Data Protection (FADP). CaptureProof will work with entities to ensure compliance with these laws as applicable.

This white paper is a high-level overview of the security and privacy protocols in place, and their implementation by CAPTUREPROOF to ensure the integrity of health data transmitted and stored by and within the CAPTUREPROOF platform.
SECURITY FRAMEWORK + STANDARDS

Control frameworks and security standards are often interchangeable terms depending upon the creator. For the purposes of this white paper, control frameworks, controls, and standards are interchangeable, as the "intent" of each of them is to provide some definition to a practice or set of practices that if performed, will protect the organization’s information assets. These consist of documented, executed, tested, implemented, and monitored controls which reduce the risk of threats to the CAPTUREPROOF platform.

HIPAA

In the U.S., certain organizations, called covered entities, that create, maintain, transmit, use, and disclose an individual’s protected health information (PHI) are required to meet Health Insurance Portability and Accountability Act of 1996 (HIPAA) requirements. Individuals or entities, like CAPTUREPROOF who perform certain functions or activities as a service to a covered entity, are termed “Business Associates”, and are equally expected to meet the requirements of HIPAA applicable to Business Associates.

Under HIPAA’s Privacy Rule, CAPTUREPROOF restricts uses and disclosures of PHI, creates individual rights with respect to their PHI, and implements security- focused administrative requirements. Among other requirements, under the HIPAA Privacy Rule, CAPTUREPROOF also implements reasonable safeguards for PHI to prevent any intentional or unintentional use or disclosure that is in violation of the requirements of HIPAA.

Under HIPAA’s Security Rule CAPTUREPROOF operates to ensure the confidentiality, integrity, and availability of its electronic PHI (ePHI), to protect against reasonably anticipated threats or hazards to the security or integrity of its ePHI, to protect against reasonably anticipated impermissible uses and disclosure of its ePHI, and to ensure compliance by our employees with these standards. Additionally, the Security Rule requires CAPTUREPROOF to put in place detailed administrative, physical, and technical safeguards to protect ePHI. This includes implementing access controls and setting up backup and audit controls for ePHI in a manner commensurate with the associated risk.

CAPTUREPROOF is fully compliant with HIPAA, and holds Business Associate Agreements with all Covered Entities and other Business Associates we work with to ensure those we partner with are held to the same security and privacy standards with which we hold our user’s data.

NIST 800-53

CAPTUREPROOF uses this control framework to meet security, privacy, and breach notification standards as outlined by HIPAA. CAPTUREPROOF uses these standards as our minimum standards for controls to be implemented to protect the CAPTUREPROOF platform, based on risks assessed.

FIPS

FIPS, or Federal Information Processing Standards, ensures CAPTUREPROOF’s compliance with federal security and data privacy requirements. FIPS are developed by the National Institute for Standards and Technology (NIST) to use when no voluntary standards exist to meet federal
requirements. They address: the compatibility of different systems, the portability of data and software, cost-effective computer security; and privacy of sensitive information in federal computer systems. The CAPTUREPROOF platform's infrastructure is FIPS compliant.

**GDPR AND FADP COMPLIANCE**

On July 10, 2023, the European Commission adopted a new Data Privacy Framework, often referred to as Privacy Shield 2.0, a valid mechanism to demonstrate compliance with the EU General Data Protection Regulation (GDPR) and the Swiss Federal Act on Data Protection (FADP). CAPTUREPROOF remains committed to data protection and to compliance with all applicable privacy laws including international laws such as the EU GDPR and the Swiss FADP. CAPTUREPROOF will work with entities to ensure compliance with these laws as applicable. This may take the form of utilizing contractual clauses or other mechanisms to ensure compliance with applicable international data protection laws.

For example, when processing personal information or personal data pursuant to a contract with a controller, CAPTUREPROOF may utilize contractual clauses to ensure compliance with the GDPR or FADP requirements. Such contractual clauses would include: (a) the subject-matter and duration of the processing; (b) the nature and purpose of the processing; (d) the type of personal data and categories of data subjects; and (e) the obligations and rights of the controller. The contractual clauses would also stipulate that CAPTUREPROOF: (a) processes the personal data only on documented instructions from the controller unless otherwise required by applicable law; (b) ensures that persons authorized to process the personal data have agreed to treat the information confidentially; (c) takes appropriate security measures; (d) will not engage another third party processor (subcontractor) without prior specific or general written authorization from the controller; (e) will enter into a contract with any third party subcontractor requiring the subcontractor to provide the same protections imposed on CAPTUREPROOF; (f) will remain liable to the controller for the performance by subcontractors; (g) assists the controller in response to requests by data subjects seeking to exercise their rights insofar as possible given the nature of the processing; (h) assists the controller in ensuring compliance with security obligations insofar as possible given the nature or the processing and the information available to CAPTUREPROOF; (i) at the choice of controller, deletes or returns all personal data at the end of the provision of services unless otherwise required by law; and (j) makes information available to the controller to demonstrate compliance with the data protection law and as necessary for audits.
KEY SECURITY + PRIVACY ELEMENTS

At CAPTUREPROOF we are very confident that we have industry leading security in place. We do not deal with physical data, rather all patient data onto our platform exists in electronic form.

END-TO-END SECURITY: FOLLOW THE DATA

One of the best ways to understand the multiple levels of security in the CAPTUREPROOF platform, is to review the path of a photo or video from the end user (Health Care Provider or Patient) to our cloud storage, noting that any data transmitted or at rest is encrypted. This process and its key security features at each stage are mapped out in Figure A.

USER ACCOUNTS

User accounts are password protected. Upon successful entry of a unique username, password and authentication token granted through mobile SMS, the user then gains access to his or her account.

Except as stated in the next sentence, CAPTUREPROOF employees are prohibited from viewing the content of files you store in a user's CAPTUREPROOF profile, and are only permitted to view file metadata (e.g., file names and locations).

Only a limited set of employees with advanced Security and Privacy Training are able to access PHI data for the reasons specifically stated within CAPTUREPROOF Privacy Policy, namely when CAPTUREPROOF is legally required to do so.

In these limited circumstances, there is strict policy and technical access controls that prohibit employee access except in these rare circumstances.

SECURE TRANSFERS

Your files are sent from CAPTUREPROOF's mobile and web apps to our servers over a secure channel using SSL encryption, the standard for secure Internet network connections.
AUDITING + LOGGING

CAPTUREPROOF's auditing process tracks all records that are created, deleted and modified. It also tracks activity on the site by users, such as, login, page view, viewing images, adding notes and other activity on the site by Patients and Medical Professionals.

BAA WITH AMAZON WEB SERVICES

CAPTUREPROOF currently has a signed Business Associate Agreement (BAA) with Amazon Web Services. Amazon's Security White Paper can be found here.

As CAPTUREPROOF has built a system on top of the AWS cloud infrastructure, our compliance responsibilities are shared. AWS operates, manages, and controls the components from the host operating system and virtualization layer down to the physical security of the facilities in which the services operate. AWS provides assurance related to the underlying infrastructure and CAPTUREPROOF owns the compliance initiatives related to anything placed on the AWS infrastructure.

SECURE STORAGE + RESERVED INSTANCES

All data stored in our databases is symmetrically encrypted using AES 256 keys. Amazon Web Services stores data over several large-scale data centers. You can find more information about Amazon Web Services' security at the Amazon Web Services' website. Encryption keys are stored using further encryption.

DATA BACKUPS

CAPTUREPROOF and Amazon Web Services keep redundant backups of all data over multiple locations to prevent the remote possibility of data loss.

SECURITY STANDARDS

CAPTUREPROOF is HIPAA compliant. The following is a shortlist of the NIST controls used to ensure the privacy and security of PHI and any other personal data transmitted and held by the CAPTUREPROOF platform.

NIST security controls have a well-defined structure, and serve as a standard by which CAPTUREPROOF defines the infrastructure necessary to ensure the privacy and security of our user's data in addition to complying with health and personal information privacy laws, including, but not limited to HIPAA.

According to the NIST framework, the security controls are organized into classes and families for ease of use in the control selection and specification process. CAPTUREPROOF implements these three general classes of security controls (i.e., technical, administrative and physical).
TECHNICAL SAFEGUARDS

This is a snapshot of CAPTUREPROOF’s technology, and the policy and procedures for its use that protect PHI and personal data and control access and prevent unauthorized access to it. These outline some, but not all, of CAPTUREPROOF’s technical safeguards.

This is just a sampling of our technical safeguards in place, for more information please contact: security@captureproof.com

NIST ACCESS CONTROL STANDARDS 164.312(a)

| Unique User Identifications:                  | - users are identified with a randomly generated user authentication number  
|                                            | - the number, not visible to users, is used for logging and auditing actions within the platform |
| Emergency Access Procedure                   | - emergency access protocol outlining individuals authorized to trigger protocol and implement manual processes  
|                                            | - outlined processes support continuity of operations |
| Encryption, Decryption, and Automatic Logoff | - all ePHI and personal data is encrypted at rest using AES SHA256 cipher and hash  
|                                            | - ePHI and personal data in transit, encrypted (256-bit SSL with TLS 1.3)  
|                                            | - 2-factor auth login and automatic log out after 10 min of inactivity on web |
**NIST ACCESS CONTROL STANDARDS 164.312(c)1**

| Mechanisms to Authenticate ePHI                                                                 | • Amazon S3 regularly verifies the integrity of data stored using check sums  
|                                                                                                   | • Amazon S3 calculates check sums on all network traffic to detect corruption of data packets when storing or retrieving data |
| Identify Users Authorized to Access ePHI                                                         | • all users must authenticate via both password and 2-factor auth, for both front and back end access  
|                                                                                                   | • media Rx are owned by one patient and one/many clinicians  
|                                                                                                   | • ePHI can be added to the system but cannot be deleted  
|                                                                                                   | • all access to front and back end of platform is audited |
| Assess Data Integ Process                                                                       | • internal monitoring systems look at real-time access logs to ensure processes are working as required – revisions made accordingly |

**NIST ACCESS CONTROL STANDARDS 164.312(b)**

| Identify Activities to be Tracked or Audited               | **CAPTUREPROOF** audits at minimum:  
|                                                            | • login attempts, failures, and successes  
|                                                            | • when ePHI and personal data is created, updated, or destroyed  
|                                                            | • when user information changes  
|                                                            | • when ePHI and personal data is accessed |
| Developed Standard Operating Procedure                   | **CAPTUREPROOF** audits:  
|                                                            | • network vulnerabilities |
breaches in confidentiality and security of PHI or personal data
performance problems and flaws in applications.
improper alteration or destruction of ePHI or personal data (information integrity).
data from logs and audit trail are used to generate exception reports quarterly

Implement the Audit/System Activity Review Process

• CAPTUREPROOF audits access and activity
• Logs are generated daily, weekly and monthly

ADMINISTRATIVE SAFEGUARDS

Physical measures, policies, and procedures are used to manage the selection, development, implementation, and maintenance of PHI and personal data and to manage the conduct of the covered entity's workforce in relation to the protection of that information. This is just a sampling of our technical safeguards in place, for more information please contact: security@captureproof.com

NIST SECURITY MGMT PROCESS 164.308(A)(1)(I)

Risk Assessment and Risk Management Program

• conduct regular vulnerability scans using industry standard vulnerability scanning tools
• daily, weekly, monthly, and quarterly scans with an increasing scan depth
• active notification system is in place to alert for changes in infrastructure integrity – directed to Security Officer
### INFORMATION ACCESS MGMT 164.308(A)(4)(I)

| Access Authorization Back-End Access | • identity-based and role-based access controls implemented  
| | • clear procedure for documentation, review and modification of user's access rights |

| Access Authorization Front-End Access | • direct access to ePHI or personal data enabled by **CAPTUREPROOF**, to patient owner of ePHI or personal data, and care teams he/she consents to be shared media |

### NIST DATA BACKUP PLAN 164.308(A)(7)(II)(A)

| Data Backup Plan and Disaster Recovery Plan | • **CAPTUREPROOF** regularly backs up ePHI and personal data by encrypting it and storing it in multiple, geographically separate locations via AWS  
| | • formal agreements/BAAs are in place with any external organizations  
| | • AWS is SAS 70 II certified enabling **CAPTUREPROOF** to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Each Zone is designed as an independent failure zone  
| | • procedures in place to enable restoration of any data loss  
| | • AWS' Business Continuity Plan (BCP) supports ongoing, worldwide business and the ability to scale to the increased scope of catastrophic events  
| | • **CAPTUREPROOF** has contingency procedures and strategies which address allowable outage times |
PHYSICAL SAFEGUARDS

Physical measures, policies, and procedures to protect a covered entity’s electronic information systems and related buildings and equipment, from natural and environmental hazards, and unauthorized intrusion. This is just a sampling of CAPTUREPROOF’s physical safeguards in place, for more information please contact: security@captureproof.com

NIST FACILITY ACCESS CONTROLS 164.310(a)(1)

| Facility Security Plans | • no PHI or personal data stored physically at CAPTUREPROOF facilities  
|                         | • clear policies in place to safeguard company facilities and equipment from unauthorized physical access, and theft  
|                         | • AWS has SAS 70 II certification  
|                         | • at AWS, physical access is controlled using professional security staff utilizing video surveillance, intrusion detection systems, etc. |

NIST WORKSTATION USE/SECURITY 164.310(b)-(c)

| Workstation Function ID and Safeguard Implementation | • clearly identified workstation protections for those personnel authorized to access PHI and personal data  
|                                                      | • Key technology safeguards for all CAPTUREPROOF workstations:  
|                                                      | • full HDD encryption  
|                                                      | • auto lock workstations after 5 min  
|                                                      | • auto log out after 10 minutes |
CAPTUREPROOF SECURITY + PRIVACY POLICIES

You can find our Terms of Service including the incorporated Security Policy, Privacy Policy, Acceptable Use Policy, Business Associate Policy and GDPR Policy at: http://captureproof.com/terms/ By using CAPTUREPROOF's Services, our users are agreeing to be bound by the Terms and incorporated policies or have otherwise agreed to the Terms and incorporated policies. CAPTUREPROOF occasionally revises these Terms and policies from time to time, and the most current version will always be posted on our website.

CAPTUREPROOF COMPANY PROFILE

CAPTUREPROOF is the HIPAA compliant platform for patients and providers to communicate remotely using chat, photos, videos and computer vision/artificial intelligence insights. Patients use CAPTUREPROOF to show-and-tell symptoms allowing providers the ability to see what the patient is describing. Patients don't have to struggle to explain their symptoms, and providers don't have to guess what patients are trying to describe with words alone. For more information on how to get CAPTUREPROOF set up for your institution.
